Ecological law is a broad and interdisciplinary field that encompasses a wide range of legal and policy issues related to the environment. It includes laws that protect air and water quality, regulate the use of natural resources, and promote sustainable land use practices. Ecological law also includes laws that address the impacts of climate change and biodiversity loss.

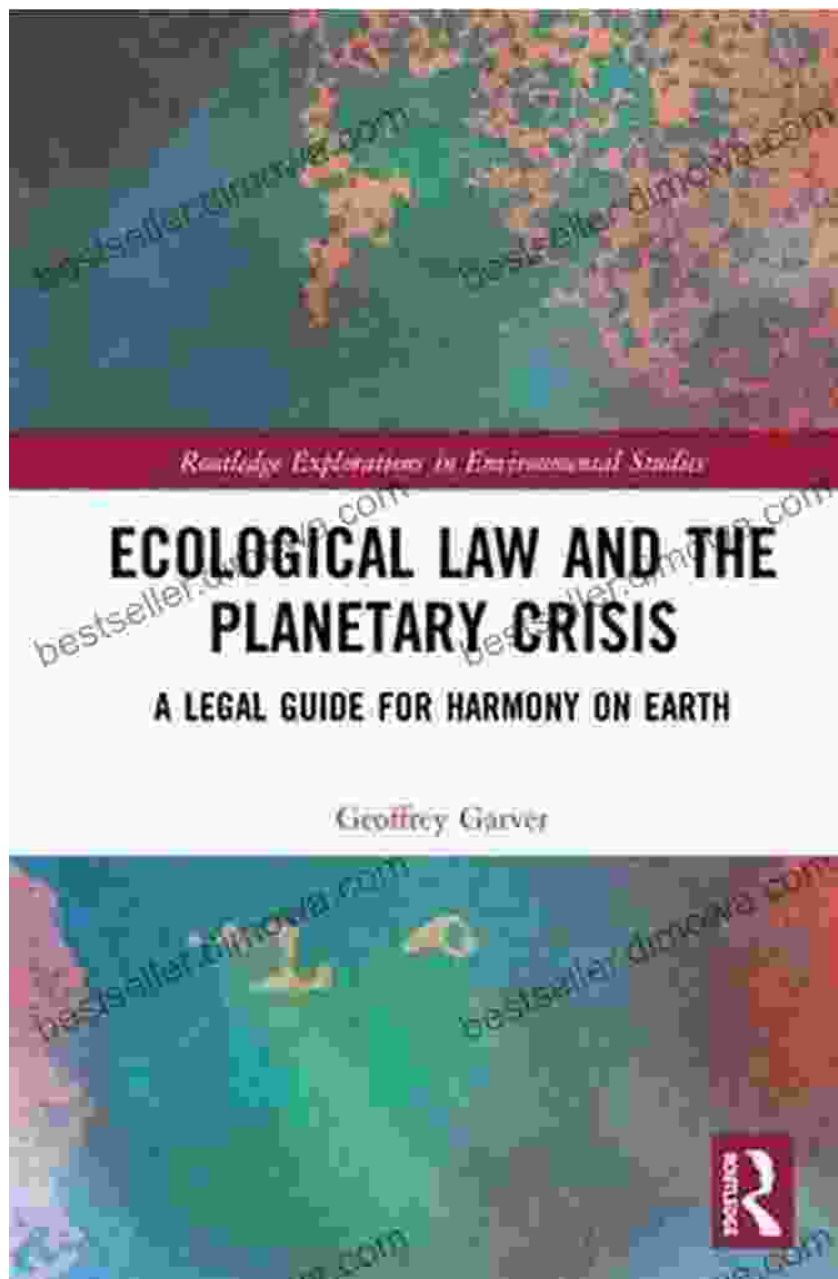

In recent years, there has been a growing recognition of the importance of ecological law in addressing the planetary crisis. In 2015, the United Nations adopted the Sustainable Development Goals, which include a number of targets related to environmental protection. The Paris Agreement on climate change, also adopted in 2015, commits countries to taking action to reduce greenhouse gas emissions and adapt to the impacts of climate change.

Ecological law is essential to achieving these goals. It provides the legal framework for protecting the environment and ensuring that we use our natural resources sustainably. Ecological law also helps to ensure that the benefits of environmental protection are shared equitably.

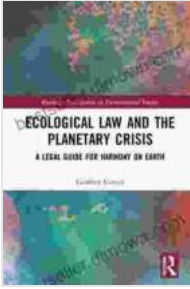

The book *Ecological Law and the Planetary Crisis* is a comprehensive and timely exploration of the legal and policy challenges posed by the environmental crisis.
