**Aground in the Anthropocene** is a transformative new book that explores the relationship between form, function, and change in the Anthropocene. This meticulously researched and beautifully written book offers a deep dive into the ways in which human activities are shaping the planet, and provides essential insights for understanding and addressing the challenges of our time.

The Anthropocene is a new geological epoch in which human activities are the dominant force shaping the planet. This epoch is characterized by unprecedented levels of environmental change, including climate change, biodiversity loss, and pollution. These changes are having a profound impact on the form and function of the Earth's ecosystems, and they are also posing major challenges to human societies.

**Aground in the Anthropocene** explores these challenges from a unique perspective. The book argues that the form and function of the Anthropocene are not fixed, but are instead constantly changing in response to human activities. This means that we have the power to shape the future of the Anthropocene, and to create a more sustainable and just world.

The book is divided into three parts. The first part, "Form," explores the ways in which human activities are shaping the physical form of the Earth. The second part, "Function," examines the ways in which human activities are affecting the functioning of the Earth's ecosystems. The third part,

"Change," explores the ways in which we can shape the future of the Anthropocene.

**Aground in the Anthropocene** is a must-read for anyone who is concerned about the future of the planet. This book offers a unique and essential perspective on the challenges of the Anthropocene, and it provides valuable insights for understanding and addressing these challenges.

## Reviews

"**Aground in the Anthropocene** is a brilliant and timely book. It offers a deep dive into the ways in which human activities are shaping the planet, and it provides essential insights for understanding and addressing the challenges of our time." - **Elizabeth Kolbert**, author of *The Sixth Extinction*
