Feynman's evidence is both compelling and wide-ranging. He examines the case of John Titor, a self-proclaimed time traveler from the year 2036 who visited the present day in 2000. Titor provided detailed information about his future, including the outcome of the 2004 presidential election and the development of new technologies. Feynman also presents evidence from the ancient world, such as the Voynich Manuscript, a mysterious book that has never been deciphered. The manuscript contains strange symbols and diagrams that appear to depict time travel devices.

Feynman's book is a must-read for anyone who is interested in the possibility of time travel. It is a well-researched and thought-provoking work that will challenge your understanding of time and space.

Here are some of the key findings presented in the book:

- Time travel is possible, and it has already happened.
- There are multiple ways to travel through time, including wormholes, black holes, and time machines.
- The past and future are not fixed, and they can be changed by time travelers.
- Time travel has the potential to be used for good, but it can also be used for evil.

Feynman's book is a powerful and persuasive argument for the existence of time travel. It is a must-read for anyone who is interested in the nature of time and space.
