Born in the small town of Steinau an der Straße, Germany, in 1963, Seifert developed a passion for technology from a young age. He spent countless hours tinkering with computers and learning about the intricacies of software. In the early days of the internet, Seifert recognized the transformative potential of email as a communication tool.

In 1995, he founded NeXT Mail, a revolutionary email service that offered users groundbreaking features such as threaded conversations, rich text formatting, and powerful search capabilities. NeXT Mail quickly became

one of the most popular email clients in the world and was a major catalyst for the widespread adoption of email as a mainstream communication method.

However, it was in 1999 that Seifert truly made his mark on history with the launch of Google Mail, later renamed Gmail. Gmail was the first web-based email service to offer a massive 1 gigabyte of storage, a number that was unheard of at the time. It also introduced innovative features such as an instant search bar, automated spam filtering, and a sleek, user-friendly interface.

Gmail quickly became the most popular email service in the world, with over 1 billion active users today. It has transformed the way we communicate with friends, family, and colleagues, and has become an essential tool for businesses of all sizes.

Beyond his technological innovations, Seifert is also known for his visionary leadership and his commitment to user privacy. He has always believed that technology should empower individuals, not control them. This philosophy is reflected in Gmail's robust privacy features, such as encryption, two-factor authentication, and the ability to control who has access to your data.

In recognition of his groundbreaking contributions to the world of technology, Seifert has received numerous awards and accolades. In 2014, he was inducted into the Internet Hall of Fame, and in 2017, he was awarded the prestigious IEEE Medal of Honor.

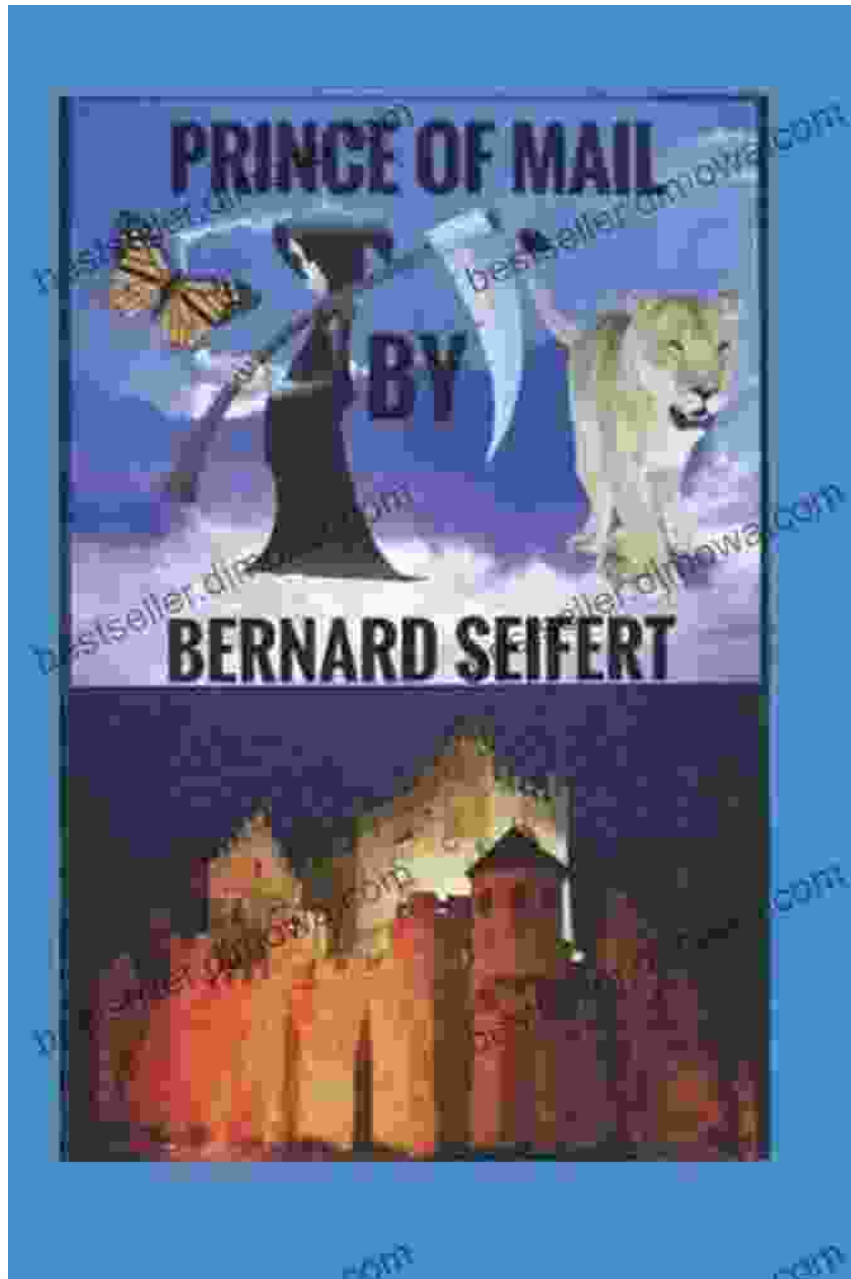

Today, Bernard Seifert continues to be a driving force in the world of technology. He is a sought-after speaker and advisor, and his insights on

the future of email and the internet are widely respected.
