

Unveiling the Secrets of Light: Analysis Techniques and Phenomena in Optical Sciences

About the Book

Prepare to be captivated by the enthralling world of optical sciences as you delve into "Analysis Techniques and Phenomena in Optical Sciences", a comprehensive compendium of cutting-edge research and groundbreaking discoveries in this dynamic field.

This exceptional volume, part of the renowned Springer Series in Optical Sciences, brings together a consortium of world-leading experts who illuminate the latest advancements in a vast array of optical analysis techniques and phenomena.

Modern Theory of Gratings: Resonant Scattering: Analysis Techniques and Phenomena (Springer Series in Optical Sciences Book 153) by Barry Mazur

★★★★★ 5 out of 5

Language	: English
File size	: 22814 KB
Text-to-Speech	: Enabled
Enhanced typesetting	: Enabled
Print length	: 729 pages
Screen Reader	: Supported
Paperback	: 32 pages
Item Weight	: 1.9 ounces
Dimensions	: 5.83 x 0.08 x 8.27 inches

Key Features

- **Laser-Induced Breakdown Spectroscopy (LIBS):** Explore the principles, instrumentation, and applications of LIBS, a powerful analytical technique for elemental analysis.

- **Nonlinear Optics:** Delve into the fascinating world of nonlinear optical phenomena, including second harmonic generation, sum-frequency generation, and optical parametric amplification.
- **Ultrafast Optics:** Witness the remarkable capabilities of ultrafast lasers and their applications in time-resolved spectroscopy, imaging, and materials processing.
- **Coherent Anti-Stokes Raman Scattering (CARS):** Discover the principles and applications of CARS, a cutting-edge technique for label-free vibrational imaging.
- **Surface Plasmon Resonance (SPR):** Explore the intriguing properties of surface plasmons and their applications in sensing, imaging, and spectroscopy.

With its in-depth coverage, expert insights, and wealth of practical examples, this book is an invaluable resource for researchers, students, and practitioners in optical sciences, analytical chemistry, materials science, and related fields.
